How do I cut my drawings? Can I load it directly into Mach3/Mach4?

Imported User 6 - 2019-04-29 - in FAQ's

- Transforming an idea into an actual part is a 3-step process: CAD (see "What is CAD?") -> CAM (see "What is CAM?") -> Control. Mach3/Mach4 is the control part of the process and requires G-code files produced by a CAM or Wizard program.
- Wizard programs are the most simple for those new to cnc.
- Advanced users/machinists will often write their own gcode.
